

FOR IMMEDIATE RELEASE

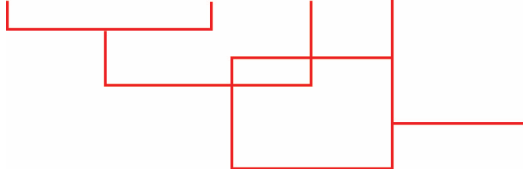

## **BCKK partners with Vision RNG to pave pathway to carbon neutrality in Ohio landfills**

**HOUSTON (April 18, 2024)** – BCKK, a leader in engineering, procurement, fabrication and field construction services, announces a strategic partnership with Vision RNG, a full-service developer of landfill gas (LFG) infrastructure, to deliver its NiTech® Single Tower Nitrogen Rejection Units (NRU) and amine systems to Vision RNG’s LFG worksites in Ohio.

Under the agreement, BCKK will provide two NiTech® Single Tower NRUs and amine systems to two landfill gas processing sites — one in Seneca County, Ohio, and one in Perry County, Ohio. Both sites are owned by [WIN Waste Innovations](#), the sustainable waste services and disposal provider that has contracted Vision RNG to develop gas conversion capabilities at both sites.

Fraser McDowell, director of strategy and business development (renewables), BCKK, said, “BCKK is proud to partner with Vision RNG to aid their efforts in reducing environmental impact by providing clean, sustainable energy for today’s customers. Our NiTech® technology provides best-in-class methane recovery that yields improved revenue streams while reducing greenhouse gas emissions.”

BCKK’s exclusive NiTech® NRU technology is engineered to deliver optimal methane recovery while minimizing the environmental impact. The proprietary

cryogenic technology features a flexible design with minimal equipment and requires low power consumption, making it an ideal pairing for Vision RNG's projects.

Bill Johnson, chief executive officer, Vision RNG, said, "Partnering with BCKK was a natural choice for us on these projects given their proven track record in larger scale NRU technology. Their commitment to sustainability aligns with our mission of driving positive change in the renewable energy sector. Together, we are ready to set new benchmarks for greenhouse gas reduction and sustainable energy production."

### **About BCKK**

BCKK specializes in full EPC projects including concept, engineering, design, fabrication, manufacturing and complete construction services. Providing full EPC services helps BCKK improve project economics by being a single-source provider for all stages of a project. BCKK is also the industry leader in nitrogen rejection with its proven NiTech® process. Headquartered in Midland, Texas, with a satellite engineering and sales office in The Woodlands, Texas, BCKK was founded in 1980 and holds numerous technology patents. ## About Vision RNG

VRNG – was formed by Vision Ridge Partners in 2021 to develop, own and operate LFG to RNG projects. Vision RNG (“VRNG”) develops, builds, owns, and operates LFG to Renewable Natural Gas (“RNG”) facilities, Landfill Gas to Energy (“LFGTE”) power production facilities, landfill gas collection and control systems (“GCCS”), as well as other potential projects that benefit landfills. We are a full-service developer who brings together a team of seasoned professionals with decades of experience across the waste management, RNG, power, oil and gas, energy trading, and infrastructure development industries. We are a group committed to long-term participation and asset optimization in the biogas industry.
